

Stumpy

Great for small to medium caliber rifles, this simple brake features muzzle rise control and won't blow dirt up onto your scope.

\$100 without barrel threading
\$165 with barrel threading

The Screamer

Only for large caliber rifles. This brake boasts a whopping 70% recoil reduction, please always use hearing protection.

\$150 without barrel threading
\$215 with barrel threading

Profiled Brake

Good on all caliber rifles, this brake features muzzle rise control and won't blow dirt up onto your scope all while matching the diameter of your rifle barrel.

\$175 without barrel threading
\$240 with barrel threading

Mad Max

Good for all caliber rifles, this brake features 70% or more recoil reduction.

\$175 without barrel threading
\$240 with barrel threading

Whisper Brake

This is not a silencer, it is a brake with a unique feature. Instead of the ear shattering noise being directed to the side of the brake, it is redirected to the front of the brake reducing the impact on the shooter.

\$300 without barrel threading
\$365 with barrel threading

The 1911 Pistol Brake

Don't get stuck that this will only fit 1911 style pistols, it will fit any style pistol that has a front recoil spring lock.

\$250 without barrel threading
\$315 with barrel threading

Custom Muzzle Brakes

These are just a few examples of the many custom muzzle brakes we design with the shooters performance in mind.

Many of our brakes feature muzzle lift reduction to help control follow up shots. In addition we keep in mind the use of scopes, our designs move the discharge ports above the center line of the brake so dust blowing up onto your scope isn't a problem.

We build our brakes on your firearm so the brake can be timed correctly. Generic muzzle brakes use shims to accomplish timing leading to brakes loosening after repetitive shots. By building the brake on the firearm the timing is machined into the brake at the locked position.

Pistol brakes are becoming more popular, our pistol brake designs are geared towards the demanding needs of the hand gunners needs. Keeping recoil reduction paired with muzzle rise incorporated into our designs the shooter is sure to have a pleasant experience.
